Project Status

The Erasmus+ project GoodVET can successfully be completed on the 31st of October 2019. In the last weeks intensive work was done on the online based analysis tool. In this tool, actors from the field of refugee integration through vocational training can analyse their measures based on the eleven indicators by specific questions. In addition, a multiplier event with interested actors from politics and practice took place in each of the four partner countries at the end of the project.

The exchange and dialogue between actors or target groups and project managers was promoted within the events. The participants had the opportunity to learn more about the project and the indicators and were thus able to analyse their own approach to the implementation of measures for the integration of fugitives through vocational training and improve it sustainably based on the research results.
